

ABSTRACT OF THE INVENTION

A retroreflective article **10** has a body portion **14** and a multitude of cube-corner elements **12** that project from a rear side **20** of the body portion **14**. The body portion **14** includes a body layer **18** that contains a light-transmissible polymeric material having an elastic modulus less than 7×10^8 pascals. The cube-corner elements **12** contain a light transmissible polymeric material having an elastic modulus greater than 16×10^8 pascals. A retroreflective article of this construction can be highly flexed while maintaining good retroreflective performance.
